

Name: _____ Thesis Title: _____

Example of a diagram and rider for an installation

Equipment, Supplies, & Props Needed

- (2) Projectors
- (1) 4-6 foot stand for the projector behind the window
- (1) Mechanism for suspending 2nd projector 8-10 ft off the ground, pointed straight down
- (4) chairs - these should be regular 4-leg chairs (as opposed to rolling office-type chairs)
- (1) Mac Studio to run the videos from in sync. (Unsure if I will need to provide long 25' HDMI cables to connect Mac Studio to projectors - I can purchase if needed)
- Behringer MS40 speakers
- Space: Ideally this will take place in a darker room so that the projections come through as brightly as possible. It doesn't have to be pitch black, but an area where overhead lighting can be turned off and window shades drawn.

Equipment, Supplies, & Props I am providing

- Table
- Window (preinstalled with 2 hanging hooks)
- fishing line to hang window (will need to know distance from top of window to ceiling once space is assigned. Note: The window is just under 20lbs)
- Projection Material: The window panes will have material affixed to enhance the projections.
- (My plan is to drive these materials in on May 6 before my thesis review and store them there until the thesis show. I will be driving them in from outside the city)
